

## Users report

Statement from MCC Business Solutions Company of Perth, Western Australia. In the year of 2010, we purchased one set of HJ-III ultrasonic impact treatment ( UIT ) equipment from Shanghai SUNBOW Metal New Material Sci. and Tec. Co., Ltd. of China after 12 months of researching and visiting all the UIT suppliers. We use the UIT equipment to treat the welding seam after welding repair so that the repair life can be prolonged. We are very satisfied with the performance of HJ-III UIT equipment and professional service from SUNBOW. In 2013 we started a sister company PT VSR Indonesia based in Balikpapan, Indonesia where there has been good interest in UIT for us. Currently we are sharing our UIT machine between companies but once budgets allow we wish to purchase a second HJ-111 UIT machine exclusively for our Indonesian on site field work.

The main specification of our purchased equipment is as follows:

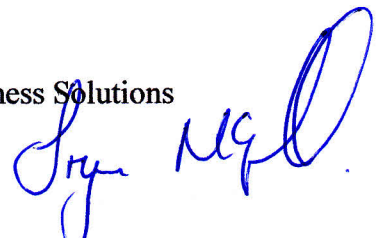

Terms	parameters
Control mode	Digital control
Transducer	Piezoelectric ceramic
Exciting current	0-4A
Work frequency	17.5±2.0KHZ
Max amplitude	50μm
Travel speed	6-25mm/s
Control of current output	DSP slug control
Weight of UIT tool	2.3kg
Size of UIT tool	Φ83mm×325mm

We appreciate the series of products made by Shanghai SUNBOW so much hereby to certify it.
